PART II KEY CONCEPTS

2 The concept of discourse community

2.1 A need for clarification

Discourse community, the first of three terms to be examined in Part II, has so far been principally appropriated by instructors and researchers adopting a 'Social View' (Faigley, 1986) of the writing process. Although I am not aware of the original provenance of the term itself, formative influences can be traced to several of the leading 'relativist' or 'social constructionist' thinkers of our time. Herzberg (1986) instances Perelman and Olbrechts-Tyteca's The New Rhetoric (1969), Kuhn's The Structure of Scientific Revolutions (1970) and Fish's Is There a Text in this Class? (1980). Porter (1988) discusses the significance of Foucault's analysis of 'discursive formations' in The Archaeology of Knowledge (1972); other contributors are Rorty (Philosophy and the Mirror of Nature, 1979) and Geertz (Local Knowledge, 1983), with Wittgenstein's Philosophical Investigations (1958) as an earlier antecedent (Bruffee, 1986), particularly perhaps for the commentary therein on 'language games' (3.5).

Whatever the genealogy of the term discourse community, the relevant point in the present context is that it has been appropriated by the 'social perspectivists' for their variously applied purposes in writing research. It is this use that I wish to explore and in turn appropriate. Herzberg (1986) sets the scene as follows:

Use of the term 'discourse community' testifies to the increasingly common assumption that discourse operates within conventions defined by communities, be they academic disciplines or social groups. The pedagogies associated with writing across the curriculum and academic English now use the notion of 'discourse communities' to signify a cluster of ideas: that language use in a group is a form of social behavior, that discourse is a means of maintaining and extending the group's knowledge and of initiating new members into the group, and that discourse is epistemic or constitutive of the group's knowledge.

(Herzberg, 1986:1)
There are a number of reasons why I believe even a tight definition of speech community (shared linguistic forms, shared regulative rules and shared cultural concepts) will not result in making an alternative definition of discourse community unnecessary. The first is concerned with medium; not so much in the trivial sense that ‘speech’ just will not do as an exclusive modifier of communities that are often heavily engaged in writing, but rather in terms of what that literary activity implies. Literacy takes away locality and parochiality, for members are more likely to communicate with other members in distant places, and are more likely to react and respond to writings rather than speech from the past.

A second reason for separating the two concepts derives from the need to distinguish a sociolinguistic grouping from a sociorhetorical one. In a sociolinguistic speech community, the communicative needs of the group, such as socialization or group solidarity, tend to predominate in the development and maintenance of its discoursal characteristics. The primary determinants of linguistic behavior are social. However, in a sociorhetorical discourse community, the primary determinants of linguistic behavior are functional, since a discourse community consists of a group of people who link up in order to pursue objectives that are prior to those of socialization and solidarity, even if these latter should consequently occur. In a discourse community, the communicative needs of the goals tend to predominate in the development and maintenance of its discoursal characteristics.

Thirdly, in terms of the fabric of society, speech communities are centripetal (they tend to absorb people into that general fabric), whereas discourse communities are centrifugal (they tend to separate people into occupational or speciality-interest groups). A speech community typically inherits its membership by birth, accident or adoption; a discourse community recruits its members by persuasion, training or relevant qualification. To borrow a term from the kind of association readers of this book are likely to belong to, an archetypal discourse community tends to be a Specific Interest Group.

2.3 A conceptualization of discourse community

I would now like to propose six defining characteristics that will be necessary and sufficient for identifying a group of individuals as a discourse community.

1. A discourse community has a broadly agreed set of common public goals.
These public goals may be formally inscribed in documents (as is often the case with associations and clubs), or they may be more tacit. The
goals are public, because spies may join speech and discourse communities for hidden purposes of subversion, while more ordinary people may join organizations with private hopes of commercial or romantic advancement. In some instances, but not in many, the goals may be high level or abstract. In a Senate or Parliament there may well exist overtly adversarial groups of members, but these adversaries may broadly share some common objective as striving for improved government. In the much more typical non-adversarial discourse communities, reduction in the broad level of agreement may fall to a point where communication breaks down and the discourse community splits. It is commonality of goal, not shared object of study that is criterial, even if the former often subsumes the latter. But not always. The fact that the shared object of study is, say, the Vatican, does not imply that students of the Vatican in history departments, the Kremlin, dioceses, birth control agencies and liberation theology seminaries form a discourse community.

2. A discourse community has mechanisms of intercommunication among its members. The participatory mechanisms will vary according to the community: meetings, telecommunications, correspondence, newsletters, conversations and so forth. This criterion is quite stringent because it produces a negative answer to the case of ‘The Café Owner Problem’ (Najjar, personal communication). In generalized form, the problem goes as follows: individuals A, B, C and so on occupy the same professional roles in life. They interact (in speech and writing) with the same clienteles; they originate, receive and respond to the same kind of messages for the same purposes; they have an approximately similar range of genre skills. And yet, as café owners working long hours in their own establishments, and not being members of the Local Chamber of Commerce, A, B and C never interact with one another. Do they form a discourse community? We can notice first that ‘The Café Owner Problem’ is not quite like those situations where A, B and C operate as ‘point’. A, B and C may be lighthouse keepers on their lonely rocks, or missionaries in their separate jungles, or neglected consular officials in their rotting outposts. In all these cases, although A, B and C may never interact, they all have lines of communication back to base, and presumably acquired discourse community membership as a key element in their initial training.

Bizzell (1987) argues that the café owner kind of social group will be a discourse community because ‘its members may share the social-class-based or ethnically-based discursive practices of people who are likely to become café owners in their neighborhood’ (1987:5). However, even if this sharing of discursive practice occurs, it does not resolve the logical problem of assigning membership of a community to individuals who neither admit nor recognize that such a community exists.
3. A discourse community uses its participatory mechanisms primarily to provide information and feedback. Thus, membership implies uptake of the informational opportunities. Individuals might pay an annual subscription to the Acoustical Society of America but if they never open any of its communications they cannot be said to belong to the discourse community, even though they are formally members of the society. The secondary purposes of the information exchange will vary according to the common goals: to improve performance in a football squad or in an orchestra, to make money in a brokerage house, to grow better roses in a gardening club, or to dent the research front in an academic department.

4. A discourse community utilizes and hence possesses one or more genres in the communicative furtherance of its aims. A discourse community has developed and continues to develop discoursal expectations. These may involve appropriacy of topics, the form, function and positioning of discoursal elements, and the roles texts play in the operation of the discourse community. In so far as 'genres are how things get done, when language is used to accomplish them' (Martin, 1985:250), these discoursal expectations are created by the genres that articulate the operations of the discourse community. One of the purposes of this criterion is to question discourse community status for new or newly-emergent groupings. Such groupings need, as it were, to settle down and work out their communicative proceedings and practices before they can be recognized as discourse communities. If a new grouping 'borrows' genres from other discourse communities, such borrowings have to be assimilated.

5. In addition to owning genres, a discourse community has acquired some specific lexis. This specialization may involve using lexical items known to the wider speech communities in special and technical ways, as in information technology discourse communities, or using highly technical terminology as in medical communities. Most commonly, however, the inbuilt dynamic towards an increasingly shared and specialized terminology is realized through the development of community-specific abbreviations and acronyms. The use of these (ESL, EAP, WAC, NCTE, TOEFL, etc.) is, of course, driven by the requirements for efficient communication exchange between experts. It is hard to conceive, at least in the contemporary English-speaking world, of a group of well-established members of a discourse community communicating among themselves on topics relevant to the goals of the community and not using lexical items puzzling to outsiders. It is hard to imagine attending perchance the convention of some group of which one is an outsider and understanding every word. If it were to happen – as might occur in the inaugural
meeting of some quite new grouping – then that grouping would not yet constitute a discourse community.

6. A discourse community has a threshold level of members with a suitable degree of relevant content and discoursal expertise. Discourse communities have changing memberships; individuals enter as apprentices and leave by death or in other less involuntary ways. However, survival of the community depends on a reasonable ratio between novices and experts.

2.4 An example of a discourse community

As we have seen, those interested in discourse communities have typically sited their discussions within academic contexts, thus possibly creating a false impression that such communities are only to be associated with intellectual paradigms or scholarly cliques. Therefore, for my principal example of a discourse community, I have deliberately chosen one that is not academic, but which nevertheless is probably typical enough of many others. The discourse community is a hobby group and has an ‘umbrella organization’ called the Hong Kong Study Circle, of which I happen to be a member. The aims of the HKSC (note the abbreviation) are to foster interest in and knowledge of the stamps of Hong Kong (the various printings, etc.) and of their uses (postal rates, cancellations, etc.). Currently there are about 320 members scattered across the world, but with major concentrations in Great Britain, the USA and Hong Kong itself and minor ones in Holland and Japan. Based on the membership list, my guess is that about a third of the members are non-native speakers of English and about a fifth women. The membership varies in other ways: a few are rich and have acquired world-class collections of classic rarities, but many are not and pursue their hobby interest with material that costs very little to acquire. Some are full-time specialist dealers, auctioneers and catalogue publishers, but most are collectors. From what little I know, the collectors vary greatly in occupation. One standard reference work was co-authored by a stamp dealer and a Dean at Yale; another was written by a retired Lieutenant-Colonel. The greatest authority on the nineteenth century carriage of Hong Kong mail, with three books to his credit, has recently retired from a lifetime of service as a signalman with British Rail. I mention these brief facts to show that the members of the discourse community have, superficially at least, nothing in common except their shared hobby interest, although Bizzell (forthcoming) is probably correct in pointing out that there may be psychological predispositions that attract particular people to collecting and make them ‘kindred spirits’.
Genre Analysis

English in academic and research settings
